

# Encryption in Endpoint

Industrial strength full disk encryption that's easy to deploy and manage

Today there's data everywhere. It might be your business' own data or even personal information about your customers and employees. Whatever it is, your people need to access it, work with it and share it. And you need to keep it safe.

With our Encryption in Endpoint we secure your computers with military standard, AES-256 bit full-disk encryption. Your people will carry on working in exactly the same way, but you can be sure they're protected. And our encryption doesn't mean that accessing endpoints is complicated. In fact, it's easier than ever. Best of all, it's integrated into our Endpoint Protection 10—delivered in one deployment and managed from a single console.

- ▶ Get started with full disk encryption that's easy and affordable
- ▶ Deploys to groups of machines in a six step wizard
- ▶ Familiar single logon for users
- ▶ Easy password recovery options
- ▶ The highest level of certification, used by governments and the military
- ▶ It's all integrated into our Endpoint 10—no separate deployment or console to manage

## Lost laptop? No problem

Over 85% of IT professionals say their business has lost a laptop carrying corporate data. We make sure you don't have to worry if it happens to you. And we think security shouldn't stop your people working in the way they always have, so we don't.

**Easily deployed** Just follow the steps through the wizard and install the bits you need to make encryption work for whole groups of computers. And you don't have to start encrypting straight away, just tick the box when you're ready.

**Making it easy for users** We give users the same experience when they power up their encrypted computer. Typing in their login details once means they're ready to go. If someone forgets their password they can answer some on-screen questions or contact your helpdesk for challenge/response to get straight back to work.

**Top notch technology** Our encryption technology is trusted by some of the world's leading companies, governments and military organizations. And it's certified to the highest possible standards, so if you're concerned about compliance you know you're covered.

## No added deployment

Best of all—it's all integrated with no separate console to manage. Manage our Encryption from the Enterprise Console. You can deploy encryption, create policies, and manage reports all in one place. Simple!
